IN THE SPECIFICATION

Please replace the original specification, with the enclosed new
copy of the specification, with is identical in wording to the original
specification filed in the parent case of this application, except that
it is in 12 point type.

On Page 2 (the first page after the title page), Lines 1-4 of the
original 10 point font version of the specification, delete the entire
first section of the application, that entitled "Related Application",
and replace it with the following:

--RELATED APPLICATIONS

This is a division of a parent application No. 08/382,752, filed
February, 1, 1995. This parent application has since been abandoned in
favor of a file wrapper continuation application number 08/956,498,
which is currently pending. The parent application, itself, was a
continuation-in-part of U.S. Patent Application 07/976,413 filed
November 13, 1992, which has issued as U.S. Patent 5,428,707.--

IN THE CLAIMS:

Please amend the claims as follows

-51. (Amended) A computerized method of performing word recognition
comprising the steps of:
    -receiving user generated word signals representing words to be
    recognized;
    -performing pattern matching upon the word signals to select which
    one or more of a plurality of vocabulary words appears, according
    to said pattern matching, to most probably correspond[s] to each
    such word signal;
    -producing an output, at a movable cursor position in a body of
    text, corresponding to the one or more vocabulary words selected
    by said pattern matching for each of said word signals;
    -obtaining information about the linguistic context of the current
    cursor position in said body of text and using said information to
    define a current language context[finding one or more items in
